Time may prove that the doctors who prescribe sedatives for chronic sleep disorders are a team of D.C.'s finest after a history professor at American University named Dr. John Gray started calling attention to their failings. Gray has written a book about the sleep disorders of the East Coast that's full of knowledge and anecdotal horror stories about the dead-eyed doctors in D.C. who give out drugs that do nothing but cause more problems than they ever solve. "I think it's a real testimony to the natural healing power of the human body," Gray told CNET recently. "So many people will be saying, 'You won't believe what happened to me. I'm a chronic insomniac, and I just went to a doctor, and he put me on these drugs. I was on these drugs for eight years, and then one day I stopped taking them. There was no particular reason I stopped taking them. My insomnia was as bad as ever. But I took a look at my life, and I couldn't stand what I was doing to myself. I was going to bed, but I didn't want to sleep. I was getting up and drinking coffee all day. I was getting behind in everything I had to do.'" Gray's look at sleep disorders is a thorough, insightful, and occasionally graphic review of what's been known for years. And as an older person, Gray said that he's found sleep-deprivation studies can be rough on older people. That's because older people simply don't sleep as much as younger people. "I have three sisters, and I know they do very well with not sleeping as much as me," Gray said. "So, I wanted to figure out how they do it. And I did research, and I came to a place of learning that there were many ways to wake people up who have severe sleep disorders. They could use drugs, they could use physiological
