The Technical Architecture Document (TAD) is an XML-based file format for storing information about AutoCAD objects such as entities, blocks, symbols,

and text. The Inserted, Transferred and Substituted (ITSS) file format allows the exchange of AutoCAD drawing files over network pipes, CD-ROMs, and removable storage. This format has the advantage of being transferable by network connections and removable media. The ADOBE PDF File format is supported by AutoCAD, where it can be used to export a drawing as a PDF file (which may be set to be a 'conversion' or 'embedded' PDF file). The Open CASCADE Geospatial Library is a Java library which allows the integration of GIS data into a drawing. Autodesk Architectural Desktop incorporates a suite of open source libraries and tools to further extend the capabilities of AutoCAD. In addition, three software products are based on ObjectARX: AutoCAD Architecture 3D, a 3D modeling application used by architects and interior designers. AutoCAD Electrical, a 3D modeling application used by electrical and mechanical engineers. AutoCAD Civil 3D, a 3D modeling application used by civil engineers, land surveyors, land planners, and many other civil engineering-related professions. What's New in the?

Markup Assist: With Markup Assist, CAD operators can easily add annotations to drawings, such as symbols, dimensions, and text. They can also draw new annotations with a few clicks, and reorder existing annotations, all from their familiar GUI. **Import from Paper:** Drag and drop electronic files directly into a drawing, and automatically send it to the correct drawing context in AutoCAD. We have published a blog post on all the CAD enhancements in AutoCAD 2023. **Workflow Improvements:** Introduced the new Select object tool. This tool helps you quickly select an object on the drawing canvas. You can select several objects simultaneously. Introduced the new Structure toolbar. Use the Structure toolbar to quickly perform many common design tasks, such as drawing a boundary box, creating an axis, converting lines to a polyline, drawing a polyline with the Midpoint subcommand, and creating and editing many more. Introduced the new Arrow toolbar. Use the Arrow toolbar to toggle between a thin, medium, and thick arrow style for 2D and 3D drawings. The Arrow toolbar also lets you increase and decrease the radius of the arrow by clicking on a slider. Introduced the new Bevel Join tool. Select a face and join that face to a polyline or line in the drawing. The new Bevel Join tool allows you to select a different object as a reference, and control the angle at which you want the edge of the face to be beveled. Introduced the new Line/Polyline tool. Use the Line/Polyline tool to create a line that follows an existing line or polyline. This tool can be very helpful in creating a new polyline by starting with an existing polyline. Introduced the new Subdivide command. This command can be very helpful in creating a regular polygon. The command offers many options, including automatic subdivision of the polygon, and selecting and drawing the sub-polygon you want the command to subdivide. Introduced the new

Arc/Rotation tool. This tool allows you to quickly draw arcs and rotations for 2D and 3D drawings. Introduced the new 3D Tools toolbar. This toolbar is used to select different kinds of 3D primitives: polygons, surfaces, and 3D objects. It also lets you select faces, lines, polylines, 3D extents, and 3D surfaces.
