I have bought this for my new Samsung HT-A6500, which has a VGA port only, although the instructions are "HDMI" and it will be a nice addition to have. I bought the controller as part of the control unit to go with the Griffin Control Box. However I'm now wondering if it might be better to just buy a standard HAVS control unit? Pros A lot less expensive than the Control Box VGA to HDMI doesn't work yet with the Samsung HT-A6500 HDMI to VGA is working but with bad picture quality (dark/washed out) Doesn't seem to recognize resolution changes when HDMI input is changed. Limited resolution options Doesn't seem to recognize HDCP display modes Controls not intuitive No ability to test multiple HDMI inputs The screen has several of the patterns described in the manual, but is unable to use them. For example, the menu requires three parameters to be entered but there is only room for the top two. As a result you can only test one channel at a time or one resolution. Cons I wish they offered the 240Hz setting I wish the resolution options were expanded. I wanted to test the 1080 resolution (not in the menu). The 210 is barely a resolution at all. I wish the screen had an on/off power button. The on/off power light is really the only thing that tells you the machine is still working. You can't tell if it's on or off until it becomes part of the whole picture. One down side that makes it not worth the money. After the initial download, you are asked to reboot the computer. This is a pain in the butt and makes the entire project take longer than it needs to. I'm not too sure why they choose to do this instead of offering a shortcut key to turn on the monitor without a reboot. After the computer is rebooted you are then prompted to turn it on and then in on a desired setting. Re: Kramer 840HXL Controller 2022 Crack Unsupported Modes, but there's a Fix And where are you getting these 240Hz modes? You can't get these without a special menu setting - and if they exist at all, they are in a special menu setting for 240Hz, which you have to select by first pressing a button to enter the special menu setting - this is the part I was asking 1d6a3396d6
