Since the late 1970s, a number of companies have produced and marketed office automation software for the graphic design professions. Unlike software for mechanical drafting, AutoCAD Serial Key is intended for the design of products using hand-drawn 2D (two-dimensional) and 3D (three-dimensional) graphics, along with the development of blueprints and other documentation. The primary purpose of AutoCAD is to be a real-time drafting system for architects, mechanical engineers, structural engineers, interior designers, and others who make product designs using 2D or 3D drawings. With its capabilities to generate and manipulate complex data, AutoCAD was intended to serve as the primary drafting tool of choice for these professionals. The AutoCAD Classic and 2D Studio products were often used by architectural firms that preferred to design the exterior and interior of large-scale, custom-built structures. Since the early 1980s, the AutoCAD design team at Autodesk began to develop the software as an on-screen drafting and detailing system for use by architectural firms. AutoCAD was able to incorporate 2D and 3D drawing and drafting into a single program. Since 1988, architectural firms have increasingly begun to use CAD programs to design not only the interiors and exteriors of buildings, but to create detailed design drawings for whole building complexes, including large hotel, office, and condominium complexes. A typical use of AutoCAD is for designers to create documentation and to produce detailed and accurate working drawings of a complex project. With the system, designers are able to draw technical specifications, like floor plans, elevations, and sections, as well as specifications for such non-technical items as HVAC, electrical, plumbing, fire protection, and other systems of a building or structure. Architects use AutoCAD as the primary application for drawing design concepts. They often create floor plans, sections, and elevations, then use 3D modeling and rendering programs to produce 3D models of their designs. The plans, sections, and elevations may then be used to construct the various spaces in the building. CAD software can also be used by individuals to create detailed 2D and 3D drawings of products, machines, and other objects. In the early days, when desktop CAD software was first being developed, the price for 3D modeling was far more than that of 2D drafting. 3D modeling was used mainly for the development of data

Having reviewed the district court's decision in this case, it is clear that we should not disturb that decision 2 The record contains the following exchange between the court and a government witness: THE COURT: [W]hen you gave your deposition and testified in your case, did you consult with an attorney about what you were supposed to tell the jury? MS. BROWN: Yes, Your Honor. THE COURT: And how did you determine who you were going to tell? MS. BROWN: I didn't have a choice. I was told what to say. THE COURT: When you say "told", do you mean you were instructed or you were told to say what you said? MS. BROWN: I'm going to be honest with you, Judge, I was told what to say. I had no choice. THE COURT: I'm not sure I understand. Did you feel--did you feel like you had a choice? MS. BROWN: No, I did not. I felt that I was being told what to say. I was given a document. It's my duty to follow those directions, Judge, and the jury needs to be made aware that it is what I was told. I wasn't told to lie or to tell the truth, but what I was told to do. THE COURT: All right. You understand that's the way this court intends to hear it? MS. BROWN: Yes, sir. THE COURT: And so you understood you had no choice? MS. BROWN: I understood I was being instructed by ca3bfb1094
