Py2Nsis Free For Windows Latest

The idea is to try to be a little easier to use and more scalable than the.NET version of the Nsis Toolkit. Features: Rich functionalities for python setup.py install scripts: creation of an installer for python scripts, with all possible modules (or installed extensions in the case of Python 2.7) some more goodies like the possibility to edit the script before saving it or to run some pre/post scripts (it'll be called 'Python code editors' in the menu) can be used for all the 'import....' lines in a python script can be used by setup.py 'install_requires' (automatically included) can be used in almost all'setup(...' lines when the 'include_package_data=' option is set in setup.cfg can be used in'setup(...' lines to force the installation of python modules can be used in setup.py 'install_requires' (except those lines containing '*') to force the installation of python extensions can be used in'setup(...' lines to automatically generate the installers can be used to force the creation of a file (or directory) at the root of the python script install path can be used to add some custom files to the Installers' directory can be used to change the installers directory, path and other configuration parameters can be used to set some packages from python list (see the setup2.py sample) allows to provide the script location at the Nsis call in the installer (via the option -p) Python 2.7 support (optional): for Python 2.7 you can use the python 2.7 installer that is bundled with the tool Full documentation and source code: read the manual that you can open from the Help menu, that's also a good starting point read the articles to see how to add custom post scripts, pre-scripts or what are the 'install_requires' settings for Python or Python 2.7 read the source code (with comments) What is the Difference with Py2exe? py2Nsis is a set of scripts that allows one to generate an installer in which the python scripts can run without the need to first install the modules themselves. The main

advantage of Nsis Python is that it's free (gratis) as long as you don't need to use the -d option
