This thread will then sleep for some time, a short period (e.g. 1/10th of a second). I am now running into a problem where each time I open a new browser tab, the loop is reset. Thus, it seems that the new JVM thread is a daemon thread that will not stop unless it is explicitly stopped. It is as if the new thread continuously runs itself. I am currently using netbeans 6.5 with a JDK 1.6 and it is WindowsXP. I will appreciate any help. Edit: I am new here and I would like to say that I am no java guru, I have been coding mostly with VB and Python. A: From this post I'd guess that your problem has nothing to do with java, but with Windows. Try running your code with a different OS.
